Art Unit: 3748

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 10-14 are rejected under 35 U.S.C. § 103(a) as being unpatentable over U.S. 5176317 (Park et al). Park et al discloses a thermal actuator comprising a rigid cup 2 with wax inside, a guide 62, a plug 63, an output shaft or piston 60, but does not disclose the special characteristics of the wax. However, it would have been obvious at the time the invention was made to a person having ordinary skill in the art to adjust the amount of wax inside the cup of Park et al to come up with the special characteristics as claimed for the purpose of generating appropriate outputs.

Claims 1-9 are allowed.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Pirkle, Rice, and Carlson Jr. disclose thermal actuators comprising rigid cups with wax as thermal actuated materials.
